I looked over the documents. The Envirostor reports all state that the Navy advised tenants at Hunters Point in 2005 that their leases would be terminated, so it seems that remedial activity didn't begin before then.

Also, references to documents that are generated in the CERCLA process don't seem to go back before 2006.

Subject: Was rad work done before mid-2005 by Tetra Tech?

Dear Robert

I hope you are well. I'm in mandatory Remedial Process training in Region 5 this week. During lunch yesterday, I talked a long time to Richard from NRC yesterday and I've been getting questions from the public about ensuring the protectiveness of the cleanup. In addition, I'm in a training course with an EPA RPM who used to work for the Navy at Hunters Pt in 2003. He remembers Tetra Tech doing work at Hunters Pt then, which is before 2005.

What I did already was I looked at the rad RACRs for the 4 parcels that are transferring next (D-2, G, UC-1, UC-2). I looked at the history of work and which contractor did what phase of work. All that work by Tetra Tech at these parcels was done after mid-2005. But I haven't looked at the rest of the Parcels to see if Tetra Tech did any rad work before mid-2005. Do you happen to know if Tetra Tech had done any work before then? If not, then would you have time to look at various documents to check? If so, I would really appreciate your help!

- Lily

Subject: FW: Anomalous soil samples - any more info pre-2008?

Hi Lily,

Please see below for responses to your questions from TtEC. Please let me know if this addresses your questions adequately and if any additional information is requested.

v/r,

Catherine Haran, PE

Subject: RE: Anomalous soil samples - any more info pre-2008?

Hi Catherine,

I've included answers to the questions:

I looked at the Tetra Tech internal rpt. It only goes back to Jan 1, 2008. Do you know why the investigation did not look at earlier samples?

The investigation involved reviewing all of the data maintained in the TtEC radioanalytical database from mid-2005 to November 2012. This investigation involved various data analytical methods using professional judgment. Due to improvements in the equipment and radioanalytical algorithms, discerning anomalous patterns was more evident in analysis of data collected after January 1, 2008, due to smaller uncertainties in results. Additional focus was spent analyzing data from that period to try to establish a time frame in which anomalous soil sampling may have occurred. That being said, anomalous patterns in gamma spectroscopy results did not appear until mid-2011; therefore, TtEC is confident that the period of mid-2011 to late 2012 contained all anomalous sampling events.

We are reviewing the draft FOSTS for Parcels G, UC-1, UC-2. I looked at the Rad RACR for Parcel G. It shows that Tetra Tech started excavation there in July 2007.

TtEC started excavating in Parcel G in July 2007, and tables containing corresponding analytical results may be provided upon request.

Regarding UC-1 and UC-2, I saw that Tetra Tech did all the work after 1/1/2008, so I assume that those samples were included in the investigation. I just wanted to confirm.

All of the samples from mid-2005 until November 2012 (the time of the investigation) were investigated. As stated above, additional focus was directed at sample results obtained after 1/1/2008. TtEC could have stated (and perhaps should have stated) in the report that the entire database was analyzed from mid-2005 onward; however, the focus was from 1/1/2008 onward. Because similar anomalous sample result patterns were not identified before mid-2011, TtEC is confident that the time period in which anomalous sampling occurred is appropriately bracketed.

I know you are preparing to transfer Parcel D-2 also. Tetra Tech also did the rad removal work there, starting with surveys in 2006. Do you know if Tetra Tech also looked at samples there before 2008?

Yes, see answers above.

Finally, I look forward to hearing back from you about whether or not the April 2014 report is available to the public and about the total number of samples confirmed to be a problem compared to the total number of rad samples collected.

The April 2014 report and previous drafts dating back to November 2012 have been submitted to the NRC and the Navy, and are public documents. From the April 2014 report, 386 samples out of 87,360 appeared

ED_002781A_00004687-00002

anomalous. Note that not all of the 386 samples have been shown to be unrepresentative of the locations from which they were collected.

Please let me know if I can provide any further data, or be of any further assistance.

Thanks!
Erik
